

Group SOW

ASSIGNMENT 2 INSTRUCTIONS (Group Assignment)

You have been assigned to a Case Study that you and your assigned Group shall use for each of the 5 Assignments in this MMI 408 course.

Based on the individual SOW, each student should create a three-slide PowerPoint presentation outlining the three most important components of his or her individual SOW. Items may include the project goals, budget, deliverable, etc.

Share the components you identified as most important with your team along with an explanation of why you feel these are the most important components of your SOW. Students should resolve any differences found in the individual SOW documents and presented in the three slides. Negotiate with the team to develop a consensus SOW.

The goal of this assignment is to meld various viewpoints into a single document to represent your organization's requirements.

Did everyone start with the same business owners? How did they change from the individual point of view to the organizational point of view?

Deliverables:

Submit slides outlining the three most important components of your individual SOW. These are to be used for creating the consensus SOW. These will not be graded. The slides should be posted to the group resources for your team and use to negotiate the consensus SOW.

As a group, combine your individual SOWs into a single, high-level organizational SOW document for the information technology case stud assigned to your team.

Complete all sections (accept section 7) of the consensus SOW, even those not completed in first assignment.

- Be brief and concise in filling out the forms.
- Make and identify a set of assumptions.
- Provide your assumptions in the project narrative and requirements section.
